YOUR MONTHLY GUIDE TO HEALTHCARE AWARENESS

## Understanding autism spectrum disorder

As your child grows, they reach milestones you can celebrate as they learn to talk, move, learn, play, and behave. If your child isn't reaching these milestones or behaves differently than expected, they may need to be tested for autism spectrum disorder (ASD).

## Diagnosing ASD

It's important to diagnose children for ASD as early as possible so they can receive the support they need to reach their full potential. Because there are no routine tests to easily screen ASD, it takes time for care providers to study and understand a child's developmental history and behavior to make a diagnosis.

## Learning more about ASD

Although most children can be screened for ASD at 24 months or older, some can be diagnosed as early as 18 months. Watch the video in the link below to learn other things you may not know about ASD.
